

## Integrated Warehouse Automation

Prime Robotics is a premier provider of end-to-end automation solutions tailored for distribution centers and warehouses.

Prime's suite of robot and execution software solutions transform fragmented workflows, empowering clients to unlock operational productivity and efficiency.

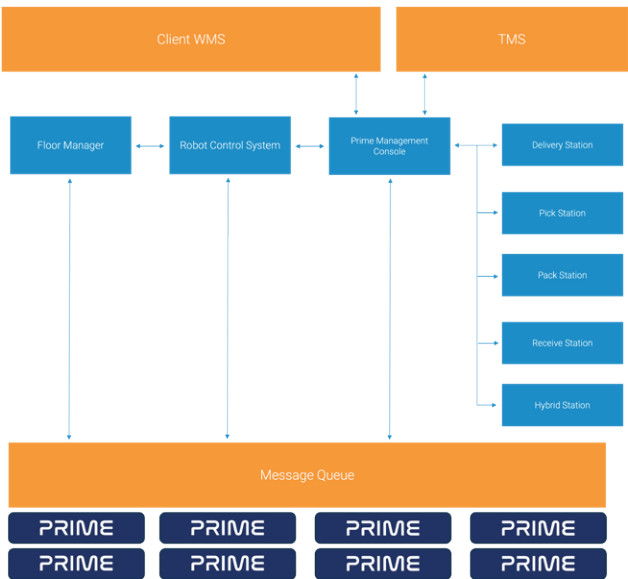

Committed to revolutionizing warehouse, supply chain, and factory operations, Prime strives to elevate businesses through best-in-class automation solutions and services.

## Prime Execution System (PES) Simple Software for Integrated Robotic Systems

Prime Robotics' user-friendly software system is simple and easy to learn, allowing warehouse staff to quickly integrate usage into their day-to-day tasks and automate key processes with efficiency, accuracy, and transparency. Prime's Robot Control System (RCS) is the heart of the system, designed to be customized for your operation. A sleek and robust user interface provides full control of your robotic fleet and integrates with your Warehouse Management System (WMS), APIs, and other business systems.

PES powers your robotic system and automated warehouse processes with the following key components:

- Robot Control System (RCS)
- Prime Management Console (PMC)
- Floor Manager
- Workflow Builder

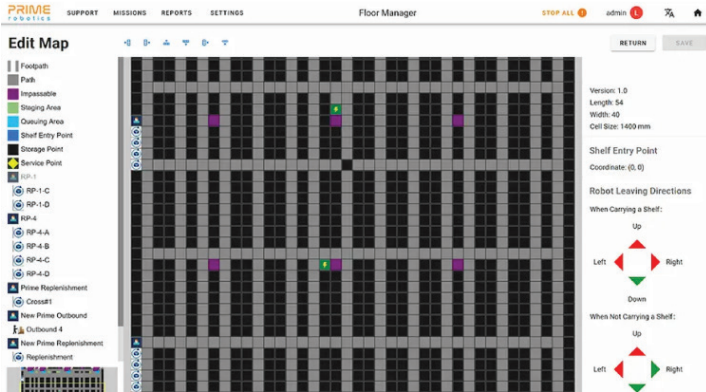

### Integration

Highly customizable and user-friendly, Prime's execution software provides an intelligent yet simple and scalable solution. Our robots and software seamlessly integrate with any Warehouse Management System (WMS), Enterprise Resource Planning (ERP), Programmable Logic Controller (PLC), or operations management software—making our solutions easy-to-use and adaptable to unique needs.

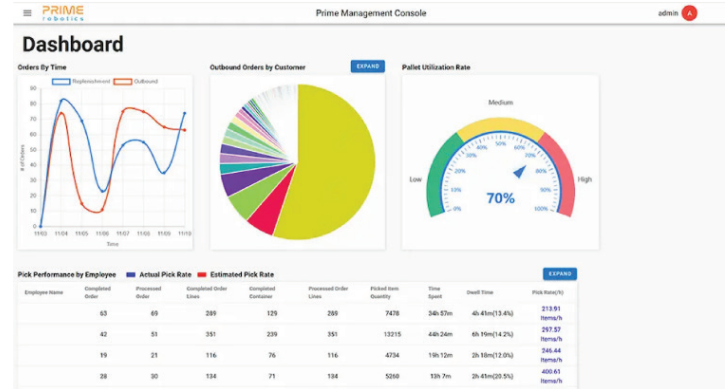

### Safety

To guarantee a safe and secure operational environment, our robots and software are equipped with advanced safety and cybersecurity features, from LiDAR sensors and emergency stop buttons to ROS/ROS2 protection layers. These features enable our automated systems to operate safely and efficiently, minimizing the risk of accidents and ensuring security of warehouse data and operations.

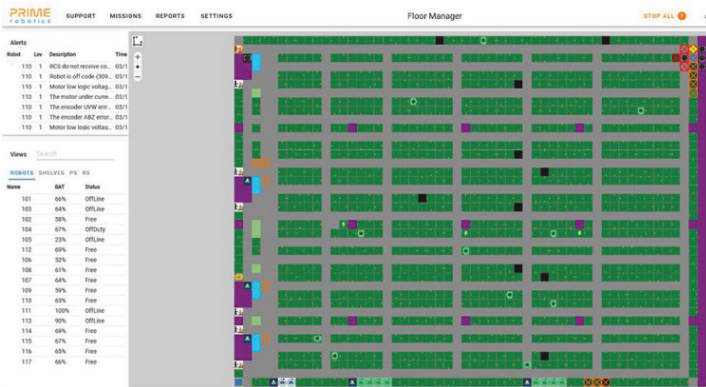

### Robot Control System

- Manage Prime robots with flexible, scalable automation software
- Generate missions
- Perform path planning and traffic routing

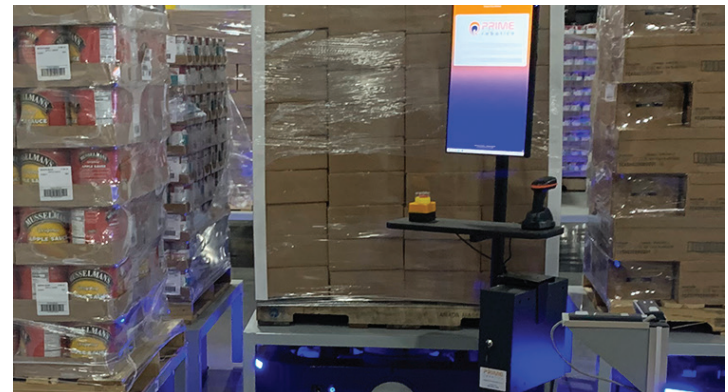

### Prime Management Console

- Customize system configurations
- Create unique user settings
- Identify inbound and outbound orders
- Adjust operational settings in real time

### Floor Manager

- Access and customize operational and human-performance efficiency reports
- Control fleet of robots
- Monitor your entire automated floor plan anytime, anywhere

### Workflow Builder

- Create new workflow movements
- Modify existing missions
- Scale robot quantity and type
